

What We Do

We design and deploy production AI systems inside your environment, built from a reusable component library, priced on outcomes, and handed off with the training and support you need to run them independently. The IP is yours. So is the capability.

Three Solution Domains

01 · Physical AI

Vision, robotics, and automation for cost-of-quality problems. Edge inference on MLX and Nvidia hardware, integrated with robotic arms, sensors, and PLCs.

Manufacturing · Defense

02 · Tokenomics

Hybrid inference and cost-to-serve, engineered not guessed. Local and cloud models routed by cost and sensitivity, with no vendor lock-in.

Enterprise Tech · Defense

03 · Employable Agents

Agents with cost controls and guardrails, not just capability. Guardrails enforced near the source, local or hybrid models depending on the environment.

Defense · Public Service · Enterprise Tech

How We Work

01 · Scope Week

A paid, one-week discovery sprint. We define the outcome, map the systems involved, and propose the delivery path: sprint track or SOW. You leave with a clear proposal either way.

02 · Sprint Delivery or SOW

Sprint track: 2-week delivery sprints, each with a defined output. SOW track: for broader, multi-system scope, fixed price, milestones agreed before we start.

03 · Day Two Support

Ongoing support scoped during the engagement, not bolted on after. Monitoring, retraining, evolution, built into the plan from day one.

Why DayTwoAI

Compounding Components

Every engagement assembles from a library of components already built and deployed. Faster delivery, lower cost, no reinventing the stack.

Outcome-Based

Buyers pay for outcomes: secure, cost-effective, and built for you. No packages, no per-seat tiers, no published dollar figures until scoped.

Full Ownership

You own the system. No lock-in, ever. Model-agnostic and cloud-agnostic by design.

Built on What You Have

No rip-and-replace. We integrate with your existing ERP, camera systems, and CI pipelines.

Traction

In Production

Running in Fortune 500 manufacturing environments today.

Partnerships

Active partnership tracks with core model and infrastructure providers.

Founding Team

Enterprise AI deployment in high tech and manufacturing over 10+ years.

Let's scope it.

One conversation to define the outcome. Start with a paid Scope Week. That's how we start.
